

Amendment "A" page 2 of 10 Atty. Docket No. 72759 [00P289PS-US00]
09/687,497

Amendments to the Claims

1 (currently amended): An entertainment system comprising:
an entertainment apparatus for executing various programs;
at least one manual controller for entering control requests
from the user into said entertainment apparatus;

audio output means for selecting and outputting one of a
plurality of sound sources based on a supplied sound output command;

~~a display unit for displaying images outputted from said
entertainment apparatus; and~~

sampling means for selectively sampling audio data from audio
data during reproducing and registering said sampled audio data in
a first file;

re-sampling means to be selectively activated based on a
request from said user for selectively re-sampling audio data from
audio data registered in said first file when reproducing said
audio data registered in said first file, the re-sampling means
registering said re-sampled audio data in a second file;

audio data processing registering means for registering said
audio data registered in said first file or said audio data
registered in said second file based on a request from said user
~~extracted one of audio data introduced from an external source as
one of said sound sources for said entertainment apparatus.~~

2 (canceled).

3 (currently amended): An entertainment system according to
claim 1, ~~wherein said audio data processing means comprises:~~
further comprising,

trimming wave editing means for trimming an excessive portion
off said extracted said audio data registered in said first file

and/or said second file based on a request from said user.

4 (currently amended): An entertainment system according to claim 1, wherein said ~~audio data processing~~ sampling means comprises ~~[[:]]~~ first effect applying means for applying an effect to said ~~extracted~~ audio data being input from outside based on a request from said user; and

said re-sampling means comprises second effect applying means for applying an effect to said audio data registered in said first file when reproducing said audio data registered in said first file.

5 (canceled).

6 (currently amended): An entertainment system according to claim 1 ~~[[5]]~~, wherein said ~~audio data re-extracting~~ re-sampling means comprises:

selecting playback means for reproducing said extracted audio data registered in said first file according to a playback attribute selected according to a control input entered from said manual controller.

7 (currently amended): An entertainment apparatus for connection to a manual controller for outputting at least a control request from the user, ~~a display unit for displaying images,~~ and audio output means for selecting and outputting one of a plurality of sound sources based on a supplied sound output command, comprising:

09/687,497

sampling means for selectively sampling audio data from audio data during reproducing and registering said sampled audio data in a first file;

re-sampling means to be selectively activated based on a request from said user for selectively re-sampling audio data from audio data registered in said first file when reproducing said audio data registered in said first file, the re-sampling means registering said re-sampled audio data in a second file;

audio data ~~processing~~ registering means for registering said audio data registered in said first file or said audio data registered in said second file based on a request from said user
~~extracted one of audio data introduced from an external source as one of said sound sources for said entertainment apparatus.~~

8 (currently amended): A recording medium storing a program and data for use in an entertainment system having an entertainment apparatus for executing various programs, at least one manual controller for entering control requests from the user into said entertainment apparatus, and audio output means for selecting and outputting one of a plurality of sound sources based on a supplied sound output command, and a display unit for displaying images outputted from said entertainment apparatus, said program comprising the steps [[step]] of:

selectively sampling audio data from audio data during reproducing and registering said sampled audio data in a first file;

selectively re-sampling audio data from audio data registered in said first file when reproducing said audio data registered in said first file, and registering said re-sampled audio data in a second file; and

registering said audio data registered in said first file or

said audio data registered in said second file based on a request from said user ~~extracted one of audio data introduced from an external source~~ as one of said sound sources for said entertainment apparatus.

9 (canceled).

10 (currently amended): A recording medium according to claim 8, further comprising the step of: ~~trimming an excessive portion off said extracted~~ said audio data registered in said first file and/or said second file based on a request from said user.

11 (currently amended): A recording medium according to claim 8, further comprising the steps [[step]] of:

applying an effect to said ~~extracted~~ audio data being input from outside based on a request from said user; and

applying an effect to said audio data registered in said first file when reproducing said audio data registered in said first file.

12 (canceled).

13 (currently amended): A recording medium according to claim 8 [[12]], wherein said step of selectively re-sampling said ~~re-extracting~~ audio data comprises the step of:

reproducing said ~~extracted~~ audio data registered in said first file according to a playback attribute selected according to a control input entered from said manual controller.

09/687,497

14 (currently amended): A program readable and executable by a computer, for use in an entertainment system having an entertainment apparatus for executing various programs, at least one manual controller for entering control requests from the user into said entertainment apparatus, and audio output means for selecting and outputting one of a plurality of sound sources based on a supplied sound output command, ~~and a display unit for displaying images outputted from said entertainment apparatus,~~ said program comprising the steps [[step]] of:

selectively sampling audio data from audio data during reproducing and registering said sampled audio data in a first file;

selectively re-sampling audio data from audio data registered in said first file when reproducing said audio data registered in said first file, and registering said re-sampled audio data in a second file; and

registering said audio data registered in said first file or said audio data registered in said second file based on a request from said user ~~extracted one of audio data introduced from an external source~~ as one of said sound sources for said entertainment apparatus.
